

## ZEOLITE MINERAL

### Advantages of Using Zeolite in Horticulture

- An excellent adsorbent with negative charge. This helps in holding the positive ions. This will prevent leaching of Nutrients.
- Light weight ( $650 \text{ kg/m}^3$ ) therefore helps in Aeration of heavy soils, at the same time helps in retaining moisture in sand-based greens.
- Reduces usage of Fertilizers and manures by more than 50%.
- Prevents leaching of Fertilizers and chemicals thus prevents flow of chemicals to underground water sources & streams. Therefore, extremely eco-friendly.
- Does not react with chemicals therefore very stable and lasts for a long time (at least 20 years)
- Very easy to apply, can be broadcast or incorporated with the green sand at the time of construction.
- Economical because only about  $1\text{-}2 \text{ kg/m}^2$  is required.
- Gives excellent results in potting mixes turf fields and substrate.
- Available Particle Size: 0 to 4mm
- Standard Packing: 50Kgs HDPE woven Bags.
