

PUMICE STONE

Pumice Stone is a naturally occurring aggregate for soil conditioning and aggregate for hydroponics, also used for potting mix.

- An excellent adsorbent with negative charge. This helps in holding the positive ions. This will prevent leaching of Nutrients.
- Light weight (650 kg/m³) therefore helps in Aeration of heavy soils, at the same time helps in retaining moisture in sand-based greens.
- Reduces usage of Fertilizers and manures by more than 50%.
- Prevents leaching of Fertilizers and chemicals thus prevents flow of chemicals to underground water sources & streams. Therefore, extremely eco-friendly.
- Does not react with chemicals therefore very stable and lasts for a long time (at least 20 years)
- Very easy to apply, can be broadcast or incorporated with the green sand at the time of construction.
- Economical because only about 1-2 kg/m² is required.
- Gives excellent results in potting mixes turf fields and substrates.
- Available in different particle sizes (2 to 10mm & 16 to 40mm)
- Packing: Packed in 50Ltrs HDPE Woven bags.
